# About Company

---

Link Locks is the brainchild of Mr. Zafar Alam, who wished to breathe new life into an industry which continued to either replicate old palatial style hardware or mass produce generic modern styles. Zafar Alam's vision was to build a brand which stands for distinctive design, beautiful and unique finishes, and precision engineering. After pursuing his Mechanical Engineering from A.M.U, Zafar Alam decided to stay back and founded the company in 1970 in Aligarh, INDIA. He has created and established from scratch, a high end brand featuring unique design and finishes. His idea is now to offer this to discerning customers worldwide.

Link Locks has made extraordinary hardware for small and large projects: luxury villas and estates, high end boutique hotels and award winning resorts. Zafar Alam's vision stemmed from the idea of introducing the West to the exceptional work of Indian artisans. He maintained a striking balance between the two different worlds and this was integral to the success of this venture. Original designs, unexpected finishes, the best quality materials and precision engineering. To this, the company has added sustainable design and production, caring for the environment. For Zafar Alam, there is no compromise on any of these core principles, as he believes that is the only way to build a lasting brand.

Today Link Locks boasts of its expertise in variety of developments, manufacturing, finishes and packaging it can offer to its customers. Since entire processes are available in-house and are absolutely under quality check at every step, ensuring excellence in quality products. Our manufacturing facilities have been evaluated, approved and high graded by some of the largest retailers. These ratings would have been impossible if we would not have shared a common culture of openness to suggestions, culture of shared belief that quality is utmost important, and a culture of health, security and safety for the environment and workforce.

Being an OEM manufacturer we are well armed to develop and supply customized products. Our in-house R & D team can custom develop products based on drawings, samples or ideas making us mass manufacturer and mass customization solution to our customers.

We welcome all your suggestions and invaluable guidance to further improve the quality of our products and services.
